

Selaginella

See Life cycle including morphology, anatomy and reproduction in this link.

<https://youtu.be/MxRINmAbAPs?t=238>

Heterospory and development of seed habit see following link

<https://youtu.be/p1cOfs17S-Q>

Steps involved

1. Heterospory
2. Reduction in number of megaspore
3. Retention of megaspore in megasporangium
4. In-situ germination of megaspore within megasporangium and development of megagametophyte
5. Development of integument from the base of megasporangium and formation of ovule
